

Unlock Improved Production Visibility, Collaboration, & Order Prioritization with the LeanDNA Clear-to-Build Report

Inventory operations are more dynamic than ever, and manufacturers need greater visibility into material shortages, as well as clear actionable insights to know which production orders are most impacted. By prioritizing the most critical material shortages, your procurement teams can reduce wasted resources and delays caused by pulling the wrong parts and improve operational efficiency for production orders.

LeanDNA's Clear to Build report gives production planners visibility into orders that are ready to build, surfaces parts preventing orders from becoming clear to build, and enables planners and buyers to better collaborate and prioritize orders to improve COTD.

GAIN VISIBILITY INTO INDIVIDUAL ORDER PROGRESS TO DRIVE PRIORITIZATION

The Clear to Build report includes a Production Order view, detailing individual order progress and items blocking that progress for enhanced planner visibility and prioritization.

KEY FEATURES

CLEAR TO BUILD PROGRESS BARS: Items needed for each order are split into four types:

-  **SOLID GREEN:** Inventory on hand covers Production Order Quantity
-  **OUTLINED GREEN:** Incoming supply scheduled to arrive before requirement date
-  **OUTLINED RED:** Incoming supply scheduled to arrive after requirement date
-  **SOLID RED:** No supply on order

EXPAND/COLLAPSE ORDERS: See detailed data on the items for that order and their supply statuses from buyers.

ROBUST FILTERING OPTIONS: Filter by planner, priority, CTB progress type and more to pinpoint critical orders based on your desired criteria.

STREAMLINE COLLABORATION BETWEEN PLANNERS & BUYERS TO OPTIMIZE PRODUCTION

The Clear-to-Build report enables planners to easily define prioritization and see buyer statuses for better collaboration and execution against COTD.

KEY FEATURES

FLAG PRIORITY ORDERS: Planners can flag production orders that should be viewed as higher priority vs unflagged orders.

SUPPLY COMMENTS: Supply Comments are included to assist with Planner and Buyer collaboration. Comments can be added directly to Purchase Order and Production Orders in the Clear to Build report, and they can also be pulled from other relevant LeanDNA reports for even further visibility, including the Purchase Order report, the Shortages by Item report, and the Shortages by Order report.
